# Power Industry Focus Powerful Results

JVC Engineering is a full-service marketing consulting firm serving the power and energy business sectors. We focus on providing expert product marketing & communication, analytics & advisory, and global recruitment & replacement services. has experienced practice directors for each business sector that will personally manage your project, large or small. JVC has served major equipment manufacturers, electric utilities; domestic & international power producers, consulting, engineering and construction firms, and strategic and financial investors for many years.

# Specialized Marketing & Communication

## Lead Generation

JVC uses well-honed marketing practices that will generate an increased number of leads and proposal volume for you. We can quickly target leads from within the utility and power generation industry to meet your specific criteria.

## Business Development & Sales

JVC undertakes direct business development & sales programs with customers to generate proposals and sales. We use our current industry network to generate sales and a pipeline of opportunities for our clients

## Custom Email Campaigns

JVC can design for you a custom email campaign that can reach out to over 15,000 power industry decision-makers to maximize your brand exposure or to introduce your products and services to the power industry.

## Webinars

Webinars have proven to be an extremely effective means for engaging a specific target audience. JVC will work with you to develop a promotion strategy that will attract decision makers within the specific market sector and then design a presentation that will effectively communicate your product message.

## Demonstration Sites for New Technologies or Markets

JVC can identify product test sites at power plants in the U.S., U.A.E., and Asia in order to evaluate new and innovative power generation and air quality control system technologies. We can make the appropriate introductions, propose and negotiate test protocols, analyze test data, and deliver reports that can be used for business analysis, strategic planning, and future publication.

# Technical Writing Expertise

## Conference Abstract & Manuscripts

JVC can identify the appropriate technical conferences or industry publications that matches your specific target audience and then craft an abstract with the qualities that conference program reviewers expect. JVC can also prepare the final article manuscript and any presentation materials you may require.

## Technical Article Writing & Publication

JVC has long experience and success securing placement of technical articles in leading industry technical publications. Our engineering and marketing expertise enables us to write polished articles that will engage the industry as well as attract prospective customers. JVC remains in frequent contact with the editorial staff of all the major power industry trade publications.

## Website Content

What sets JVC's website solutions apart is our ability to present technical content in an appealing way and design easy-to-navigate and aesthetically appealing websites. Our power industry background enables us to quickly grasp the technical aspects of your products as well as your unique marketing needs. This potent combination of technical skill and marketing finesse enables us to create a website that effectively communicates with customers as well as provide sales leads.

## Publicity & Branding

JVC offers full-service public relations programs that will increase your market presence and industry visibility. Our expertise in market analysis and strategy enables us to conceive, analyze, and execute high quality, consistent marketing communications that emphasize your unique product or service in a range of media.
